increasing training  
value.**

## **Supports Five Breaching Tactics**

- Ram
- Pry
- Shotgun
- Explosive
- Failed

A successful breach is critical to tactical team members faced with gaining quick access into a barricaded or fortified location in high-risk situations. Range Systems 5-in-1™ Breach Door provides the training tool for personnel to learn the skills of forcible entry techniques, tactics, and procedures.

The unique design of Range Systems 5-in-1™ Breach Door supports five different breaching scenarios – Ram, Pry, Shotgun, Explosive, and Failed. Eliminating the need to sustain a variety of breach doors and utilizing low cost consumables in its design, Range Systems 5-in-1™ Breach Door reduces the cost of training while increasing the training value.

The strike plate attachment protects the door from damage and provides a realistic response when hit during ram training.

Master the required skills needed for tactical entry by practicing and rehearsing with Range Systems 5-in-1™ Breach Door. Follow current Tactics, Techniques and Procedures (TTPs) to train as you fight, creating proper muscle memory techniques.

Range Systems 5-in-1™ Breach Door is constructed from 2" x 2" x 3/16" powder coated structural steel and withstands manual, mechanical, shotgun, and surgical explosive procedures. Low cost sacrificial wood inserts and panels are used to protect the door from damage for ram training and to accommodate other dynamic entry procedures.

The areas frequently damaged during execution of forced entry techniques are replaceable. Locksets can be easily installed in wood replacement panels that simply slide into the frame as well as the replaceable door jamb.

To accommodate simulated breaches of wood, steel, and fortified doors, Range Systems 5-in-1™ Breach Door can be adjusted to replicate the force necessary to breach these compositions. By utilizing low cost consumables that are easily replaceable, the 5-in-1™ Breach Door can be quickly reset for the next training scenario, providing maximum training with minimal set up and reset intervals.

Range Systems 5-in-1™ Breach Door is available as a pre-hung door or stand-alone model with a removable base. Inward door opening is standard but outward opening is available as an option.

**Pre-Hung Door** Designed for installation in shoot houses or breach bays, the 5-in-1™ pre-hung door fits standard size rough openings of 38 inches x 82-1/2 inches. The frame has pre-drilled tabs to provide solid integration into existing or new structures and allows the door to be quickly installed with common hand tools and lag bolts. The door can also be welded into place. Custom sizes are available to fit your specific requirements.

Available in right and left hand swing. Weight 340 lbs

**Stand-Alone Door:** The stand-alone model with removable base assembles quickly with common hand tools and can be easily dismantled for transport to an alternate training site or for storing flat. The removable base model features a low profile front support leg to reduce trip hazards.

Available in right and left hand swing. Weight 450 lbs
