

Product Overview

Range Systems Pro-Tacts™ Knee Wall System is a free standing advanced ballistic barrier designed to protect critical downrange equipment, such as electronic target systems, pop-up targets, running man systems, and other range assets that could be damaged by direct bullet strikes. Engineered for durability and safety, this system effectively absorbs and encapsulates rounds, reducing the risk of ricochets and bullet fragmentation while maintaining the integrity of valuable range infrastructure.

Built to perform in a variety of shooting range environments, the Pro-Tacts™ Knee Wall System is designed to withstand pistol and rifle rounds up to 7.62 caliber. The system features 2-inch thick Dura-Panel™ ballistic rubber, the same material used in our S.M.A.S.H. Shoothouses and tactical ranges, is securely adhered to the steel plate's front face. This specialized rubber is designed to absorb, encapsulate, and safely contain bullets, significantly reducing ricochets and back splatter. Each panel is capable of capturing up to 2,200 rounds before needing replacement, ensuring long-lasting performance.

Key Features & Benefits

- 3/8" AR500 steel plate – A battle-tested material known for its superior ballistic resistance, capable of withstanding repeated impacts from high-velocity rounds.
- 2-inch thick Dura-Panel™ ballistic rubber – A specialized material securely adhered to the steel plate's front face, designed to absorb, encapsulate, and safely contain bullets, significantly reducing ricochets and back splatter.
- Freestanding structural design – Supported by anchored steel columns with base plates, ensuring a stable and self-supported configuration that does not require additional structural modifications to the range.
