

## Product Overview

The Army E-Type Plastic Target from Range Systems is a durable, ribbed silhouette. Designed to support a wide range of live-fire training scenarios, this versatile target backer features a universal mounting hole pattern, making it compatible with most Stationary Infantry Target (SIT) holders.

Engineered for extended use, the Army-E Target is constructed from a semi-self-healing proprietary plastic compound that can withstand thousands of rounds—performance will vary depending on caliber, shot placement, and distribution. Its 7-rib reinforced design significantly enhances stiffness and structural integrity, ensuring long-lasting performance on the range.

Built to perform in all environments, the Army-E's proprietary plastic remains stable within a recommended operating temperature range of 32°F to 100°F. It is also resistant to humidity, minimizing deformation and brittleness in harsh conditions. The material is available in vibrant, high-visibility colors to enhance target acquisition and engagement—even at extended distances or in low-light conditions.

## Key Features

- Ribbed E-Type Silhouette – Standard ARMY-E design for military training
- Semi-Self-Healing Plastic – Withstands thousands of rounds under normal use
- 7-Rib Reinforced Structure – Increases stiffness and durability
- Proprietary Plastic Compound – Stable in high/low temps and high humidity
- Universal Mounting Pattern – Compatible with most SIT holders
- High-Visibility Color Options – Enhances target recognition and accuracy
- No minimum order quantities

## Product Specifications

- Dimensions: 19.5" x 40"
- Weight: 4.31 lbs
- Colors Available: OD Green, Blue, Orange, Red, White, Yellow
- Semi-self-healing plastic with thick ribbed construction
- Recommended Operating Temperature: 32°F – 100°F
- Rated for Calibers: Up to .308 / 7.62
- Meets all TC 25-8 regulations, TAA Compliant
- Made in the USA
